

They have started to work.

I'll bring more fresh water containing a lot of oxygen for the fish.

Fresh water from the well isn't enough. Please help to give the fish more fresh water.

A few days later the fish became well and looked happy.

Now the fish have enough oxygen and look fine.

I'll draw more fresh water from the river so that I can breed more fish. Now, let's celebrate our healthy fish!!

Important Pointers for Good Fish-breeding

Right number

If you breed too many fish in a small fish farm, the water in it loses too much oxygen. So, you should breed the right number of fish for the size of the pond.

No hope in the water!!

Help!!

Paying attention

Everyday, you should pay attention to the condition of the fish in the pond to see if they have enough oxygen or not. Besides that, you should watch out for fish diseases and make sure the water is clean.

Objective:

To make learners aware of the importance of oxygen in the water for breeding fish and to help them to understand the simple mechanism of breathing.

Target:

Self-learning level neo-literates

Guide for Utilization

Application:

1. Instructor distributes the book to the learners, telling them to read it. Then asks whether they have had experience in breeding fish.
2. Instructor and learners discuss possible ways for taking concrete action to breed fish well.
