

# Let's look after the young plants!

Raising a plant is just like raising a child, affection is important. You have to weed and give manure.

Watering plants and making fences, I can't wait for the trees to grow!

Let's cover each fruit with a paper bag to keep the insects away.

It's almost 10 years since we learned how to plant trees. Now our village is full of mature trees and plants, so our income has increased and life gets better and better!

We are so glad to have such a large crop!

**Guide for Utilization**

**Objective:**  
To motivate learners to plant trees for supplementing their income, providing concrete information on kinds of trees according to their uses, as well as time required for growth.

**Target:**  
Middle-level and self learning neo-literates

- Application:**
1. Before distributing the book, instructor and learners discuss the circumstances of forests and variety of trees around them.
  2. Instructor distributes the book and asks learners to read and to discuss the possibility of planting trees and which trees is/are suitable for supplementing their income.
  3. Instructor suggests and advises learners how to plant trees concretely for supplementing their income.
