

# OUR FOREST

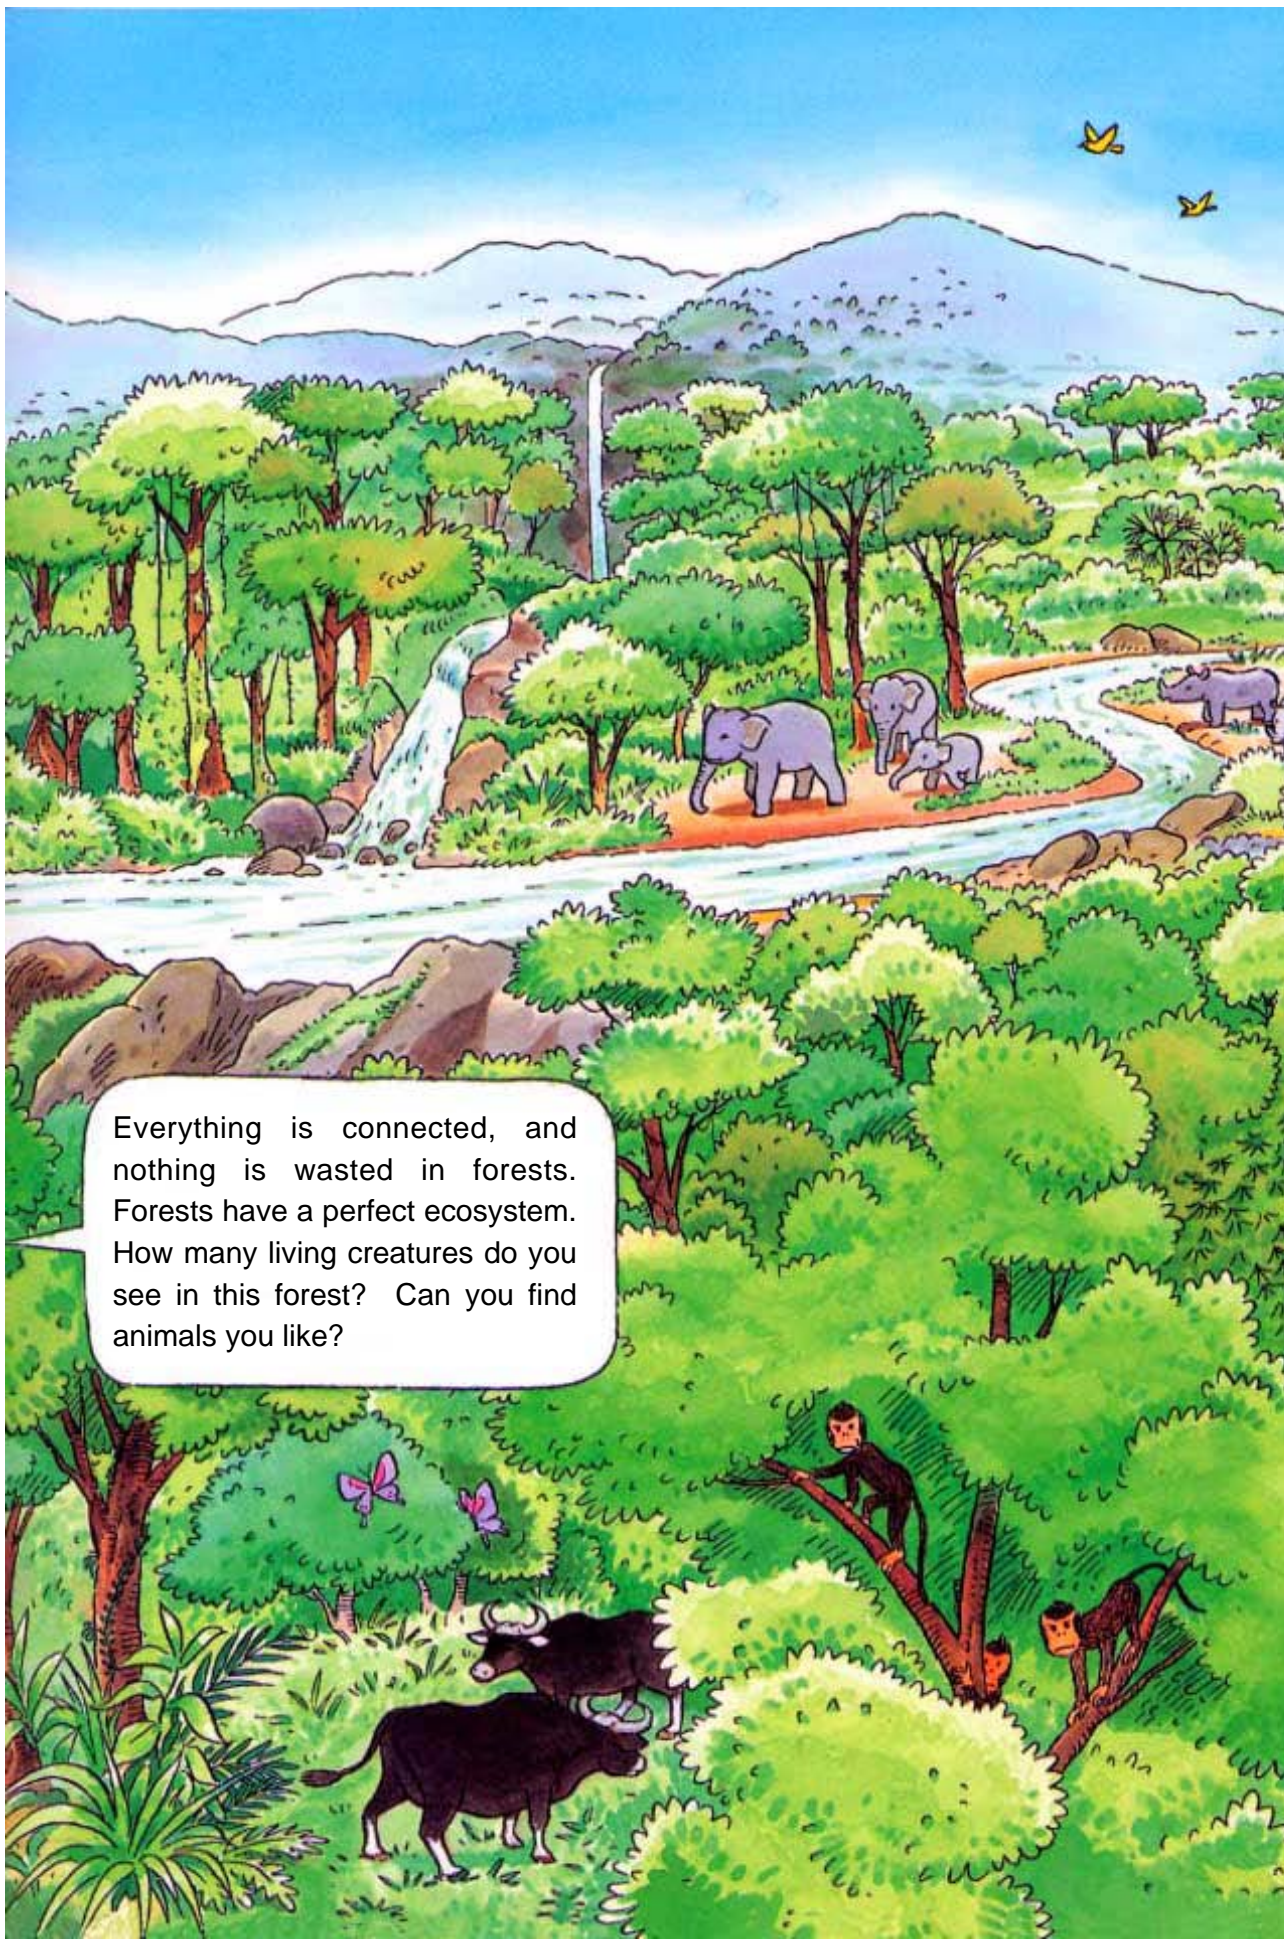

I always feel good in the forest.

We come to the forest to get honey, herbs, and mushrooms, and sometimes for picnics. I love breathing fresh air, touching clean water, looking at beautiful flowers and trees, and listening to birds singing.

Did you know that there are thousands of insects, plants and animals in forests? Forests form the storehouse of biodiversity for our planet.

\*Words in Bold Italic have explanation in the back cover.

Everything is connected, and nothing is wasted in forests. Forests have a perfect ecosystem. How many living creatures do you see in this forest? Can you find animals you like?
