

A large, faint watermark of the Ashoka Chakra is centered in the background of the slide.

**INTERNATIONAL EXCHANGE PROGRAMME
FOR TEACHERS FROM INDIA TO JAPAN, 2024**

My visit to Koshigayakita High School was the best event in Indo Japan Teachers Exchange Programme due to the following reasons:

The school integrates theoretical instruction with activity-based learning, fostering a holistic educational environment.

Students were engaged in practical applications by creating balloons to understand physics concepts

The cultural values were clearly observed where the students played beautifully Koto Instruments.

A lot of scientific activities were presented through PPT. like Creating brighter PET bottles for use in disaster situations. Investigating the relationship between the loudness of a balloon burst and puncture methods

- The learnings at Japan schools was very well implemented in our school, where my co-teachers and self organized science week.
- It was a fascinating and educational event that showcased the marvel of Science and Technology during which children exhibited working and non-working models to bring out the concept of science.
- Many cultural activities were organized
