IMPRESSIVE EVENT

During my visit to three schools in Japan, I observed an educational approach focused on student engagement through questioning, exploration, and investigation, which deepens understanding and prepares students for lifelong learning. A standout experience was at Tokyo Yurikago Kindergarten, where young children learn about the environment through play and outdoor activities. This hands-on Nature Education fosters "experience-based knowledge" and helps instill sustainable lifestyle habits and attitudes for the future.

ACTION PLAN AND FUTURE PROSPECTS

- 1. I'm excited to stay connected with the educators I met and explore the possibility of organizing future collaborations between our schools to continue fostering cultural and educational exchange. I've already been in touch with the educators from Japan whom I met during the exchange meeting, and I'm pleased to share that three schools have confirmed their participation. We have begun planning the initiative and aim to implement it by the end of this month.**
- 2. I am eager to implement Japan's educational approaches, which emphasize student engagement and active participation through questioning, exploration, and investigation. These methods foster a deeper understanding of content and skills, helping to prepare students for lifelong learning and adaptability in an ever-changing world.**
